

Senior Helper Application - CEN3024C Course Project Milestone 6

10/14/25

7:30 PM

Meeting Total: 90 Minutes

Location: In-person & Webex

I. Meeting Overview

Reviewed the importance of employing security early within a project/application, implementing Cross-Origin Resource Sharing (CORS), and completing a final Security Design Review prior to the final CEN3024C presentation. Collectively worked on the individual project and researched pros and cons to implementing different types of CORS policies.

II. Team Member Roles

Role	Functional & Component Sub-Team	Contributor Name
Interim Team Lead, Test	Login/Logout Feature	Tamia Jenkins
Scribe	Appointment Feature Educational Modules Feature	Lauren Knotts
Database	Appointment Feature	Dewey Mccrary
Security SME	Login/Logout Feature Senior Management Feature	Baudelaire Messago Ngumouo
Backend Developer	Login/Logout Feature Educational Modules Feature	Ricky Serrano
Database	Appointment Feature Senior Management Feature	Britton Sutherland

III. Team To-do's (As of 10/14/25)

- Anyone interested in adding the 'AI Scam Checker' feature should research into ideas and ways to implement the feature this week.
- Decide on and implement a CORS policy within the Senior Helper application.

IV. Meeting Notes

- Team's dedicated security member must complete an SDR and include it within the final CEN3024C presentation.

V. Decisions

- Next team meeting: Undecided; otherwise, 10/21 as regularly scheduled.
- Implementing CORS Policy: Undecided as of 10/14/25.

Senior Helper Application - CEN3024C Course Project Milestone 6

10/21/25

6:00 PM

Meeting Total: 180 Minutes

Location: In-person & Webex

VI. Meeting Overview

Discussed on how to implement a CORS policy within the Senior Helper app, the team decided that a global-level policy would work best for the scope of the application. Conducted research on various interest areas such as implementing session timeouts and scam checkers. Created an early version of the scam checker which uses pre-defined rules to determine the 'scam score' of a text. This score is then used to divide the system's confidence into 3 categories: "Likely a Scam", "Suspicious Content", and "Seemingly Safe" which helps users to determine the likelihood that the provided text is a scam and/or malicious.

What the App's Contributors Worked on During this Meeting:

- Tamia: Researched how to implement session timeout and investigated salt and hash.
- Baudelaire: Worked on the individual project.
- Dewey: Worked on implementing salt and hash into the project and troubleshooting various application errors.
- Lauren: Revised milestone document, created global CORS policy and config package, researched and implemented an early 'Rule-Based & Heuristic Scam Checker' (not AI-based).
- Britton: Reduced code redundancies and researched idle timeout feature.
- Ricky: Assisted classmates with the individual project and with finding bugs in the new User service and controller.

VII. Team To-do's (As of 10/21/25)

- Implement global CORS policy within the Senior Helper app.
- User credentials should no longer be stored in plain text; applicable classes should generate a random salt and securely hash passwords using an appropriate algorithm before saving to the database.
- Any authenticated entities should store only the salt and hash fields, not raw passwords.

VIII. Meeting Notes

- Still determining the feasibility of creating a scam checker and what direction would work best to implement it within the application. Current implementation uses a rule-based and heuristic scoring system to determine whether a message is a scam.

IX. Decisions

- CORS policy will be implemented at the global level.
- Quizzes will be adapted from modules, rather than lessons to simplify the overall educational feature of the application. This will reduce the total number of quizzes within the application.
 - Quizzes will be independent of lesson completions and have their own corresponding table within the database.
 - Quizzes will not determine whether or not a user can progress to another module, rather treated as a supplementary learning tool.
